

Country Manor Fire Pit Kit

The Country Manor Fire Pit Kit is designed using small Country Manor pieces and capped with the Country Manor Universal Cap. Available in the Brownstone color only, the fire pit can be used to burn wood, or with the addition of a metal fire ring and gas line adapters, can be used to burn natural gas.

Fire Pit Size:

Inside Diameter: 37"
Outside Diameter: 61"-62"

Kit Includes:

UNIT:	PCS:
Country Manor - Small	84
Country Cap - Universal	12
Country Cap - Special Cut	4
Masonry Adhesive Tube	1

*Lava Rock NOT Included. Sold separately when converting to gas burning fire pit.

Basic Installation:

Site Selection:

When selecting a site, be sure to select an area that is away from any structures or flammable items.

Level Base:

Fire Pit can be placed on a level concrete slab or crushed gravel leveling pad. Simply excavate an area the size of the fire pit and fill with approx 2" of crushed gravel. Level and compact.

Stacking the Courses:

Follow the course diagram to the right for 3 courses of Country Manor Small Units and then top using the Country Cap Universal and Special Cut pieces. Be sure to offset each course so the joints between the block do not line up with one other. To connect each course, you can use a small amount of masonry adhesive.

Gas Burning Fire Pit:

If building a gas burning fire pit, be sure to lay out all gas pipes and make all connections before beginning construction. RCP Block & Brick recommends hiring a NFI Certified Technician when making natural gas and propane connections for any fire feature.

First 3 Courses:
28 pieces per course

Top Course:
12 Universal Cap
4 Special Cut Pieces *

*Special Cut Pieces Cut to 8" Wide
